STATINTL
MEMORANDUM FOR THE RECORD

SUBJECT: Discussion with [REDACTED] Regarding Safety Device
for Movable Shelving (RE-LO-18-70)

STATINTL

1. I met this date (21 December 1970) with [REDACTED]
to advise them of the hinge-type, secondary safety device that had been
developed for the [REDACTED] moveable shelving project.

STATINTL
2. I showed a sample of the microswitch proposed and drew a sketch of
the device that had been developed during our visit. Both Safety Offices agreed
that the device proposed sounded better, and they both agreed to its use. They
were advised that the device we had "tested" would be installed on company's
shelving in their local office. Mr. [REDACTED] indicated his interest in seeing this
when it was available. (I will coordinate this.)

STATINTL
3. I also surfaced my feelings against a safety device override switch on
the shelving. Mr. [REDACTED] agreed and indicated he would investigate this further.
A keyed device in lieu of the simple pushbutton was agreed to if the override
switch is required.

STATINTL
4. Mr. [REDACTED] was also advised of the safety value of the planned lighting
control. The control of two banks only is not dictated by safety but will provide
an indicator that the aisle is occupied.
